1 PASA 2020

This website houses all the technical documentation for the Pennsylvania Alternate Assessment, 2020. The table below provides a brief overview of the website contents. Following the table is a brief description of the test design and development.

2 Chapter 1: Test Design and Development

PASA is designed to reflect appropriate adaptations of PA content standards (alternate eligible content – AEC) that allow students to show what they know and can do using scaled performance scores (with anchor items providing comparable forms from year to year). Across various reporting categories, the eligible content is articulated with task specifications that are then applied to two forms: (a) Tier 1 for very low performing students and (b) Tier 2 for higher performing students.

Guide to Reading the Specification Table (with Science as an example)

2.1 Summary of Test Specification (TS) files for ELA, Math, and Science

In each of these files, the PASA test specifications are summarized for each subject area, including the purpose of the test, the content depicted, a description of two tiers used for very low performing students (Tier 1) and higher performing students (Tier 2), articulation of four performance categories (emerging, novice, proficient, and advanced), the test format and student response, the scoring system, and finally tables (for each grade) showing the number of items with various AECs.

See Appendix 1.1 (ELA), Appendix 1.2 (Math), and Appendix 1.3 (Science)

Summary of Appendices/Findings: All three tests were consistently designed with a number of key features that addressed alternate eligible content (AECs) reflecting academic standards: (a) accessibility (through tiers of scaffold), (b) sensitivity to a range of performance across proficiency categories, (c) layout

and administration, and (d) breadth across all grades (3-9 and 11). Importantly, the tests include a wide range of AECs with items distributed throughout them.

Update of Tier 1 & 2 files for ELA, Math, and Science In fall 2019, PASA items were modified by removing extra (secondary and tertiary) prompts. As well, the language of the prompts themselves was revised to better distinguish the two tiers.

See Appendix 1.4 (ELA), Appendix 1.5 (Math), and Appendix 1.6 (Science)

Summary of Appendices/Findings. Perhaps the most important feature of the PASA is its application to a wide range of skills in the population (students with the most severe cognitive disabilities). Using a two tier approach, students should have access to appropriate items, given their communication skills and use of language. These tiers generally vary in the number of words, complexity of words, and use of graphics. In 2019, the tests across both tiers were revised to better reflect the consistency across the tiers and deploy a single follow-up prompt with a dichotomous score (0 for incorrect and 1 for correct).

3 Item-Person Distributions

The PASA is designed to sample Alternate Eligible Content (AEC) in reading, writing, mathematics, and science in a purposeful and validated manner. AEC represent a reduction in breadth, depth, and level of complexity of the Eligible Content (EC) so that academic standards are both rigorous and appropriate for the students with the most severe cognitive disabilities while still ensuring access to the general education curriculum. PASA items, for both Tier 1 (less academically complex relative to AEC) and Tier 2 (more academically complex relative to AEC) PASA assessment-types, were scored dichotomously on a 2-point scale: 1 point awarded for a correct response and 0 points awarded for an incorrect response.

In this chapter, plots of PASA item difficulty and person ability (θ) are paired and shown by grade, content area, and tier. In general, the smaller the number of correct responses for a given item on an operational test, the higher its difficulty, and thus, the higher the item's location on the calibrated scale (as displayed in each plot). Once item locations are calibrated, the person ability estimates are measured on the same scale, and thus, can be compared to item difficulties as an indicator of how closely item difficulties match test-taker abilities for each test administered. A greater proportion of overlap between the two indicates a closer match between item difficulty and person ability, whereas less overlap indicates the opposite.

Generally, the plots shown suggest that most tests had an appropriate range of item difficulties represented, from easy to difficult, with item difficulties typically ranging between -4.0 and +4.0 on the calibrated scale, and that these ranges overlapped appropriately with person ability distributions. However, two general exceptions are notable: (1) some tests showed a mismatch in item difficulty-person ability whereby the two distributions have substantial areas of non-overlap, while (2) other tests contained "outlier items" with have an estimated difficulty far below or far above the estimated person distributions.

3.1 Non-Overlap in Item-Person Distributions

Grade 3, ELA, Tier 1 is an example of the first exception to the generally appropriate ranges and overlap observed. All but a single item ranges between about -1.0 and 0.0 on the calibrated scale as compared to the person ability distribution plotted just below that ranges from approximately -2.5 to 2.0 on the same scale. In this example, about half of the students who took the Grade 3, ELA, Tier 1 test had an ability above all estimated item difficulties (except for a single outlier item at the far-high-end of the observed range in difficulty). Tests in which items were generally *too easy* relative to person ability include:

- Grade 3, ELA, Tier 1
- Grade 3, ELA, Tier 2
- Grade 4, Math, Tier 2
- Grade 6, ELA, Tier 2

- Grade 7, ELA, Tier 2
- Grade 8, ELA, Tier 2
- Grade 11, ELA, Tier 2

Tests in which items were generally *too difficult* relative to person ability include:

- Grade 4, Science, Tier 1
- Grade 8, Science Tier 1
- Grade 11, Science, Tier 1

Recommendation: For future test administrations, these tests, and any others showing substantial non-overlap between item difficulty and person ability ranges, should likely be examined with items removed/replaced to bring the distributions closer in line with one another relative to the calibrated scale.

3.2 Outlier Items in Item-Person Distributions

With respect to the second exception, some tests had one or more “outlier items” with an estimated difficulty far below or far above the estimated person distributions. Grade 11 Math, Tier 2 and Grade 11, ELA, Tier 1 is an example of former, in which two items have estimated item difficulties far *above* the estimated person ability range of about -2.5 to 2.5 on the calibrated scale. Grade 11, Math, Tier 2 is an example of the latter, in which two items have estimated item difficulties far *below* the estimated person ability range of about -1.75 to 1.75. For the 2019-20 academic year, some items were so far above or below the estimated person ability ranges there were eliminated from these analyses, including:

- Item E06BV4.1.1b-5 (estimated difficulty of -730.74 on the Grade 6, ELA, Tier 1 test)
- Item M05AT2.1.3a-9 (estimated difficulty of 24.44 on the Grade 5, Math, Tier 1 test)

Recommendation: For future test administrations, the two items removed for analyses, and other items with similarly out-of-range estimated difficulties, should likely be examined and either revised to bring them closer in line with typical person ability ranges, or discarded/replaced.

3.5.4 Grade 8 Tier 2

3.5.5 Grade 11 Tier 1

3.5.6 Grade 11 Tier 2

4 Marginal reliability

Marginal reliability is a measure of the overall reliability of a test, within an item response theory (IRT) framework, based on the average standard error conditioned on the range in person ability (or theta). The test information function (or TIF) conveys the precision of the test at any point in the person distribution, with the inverse representing the standard error in measurement. Thus, given this inverse relation, the larger the measurement error at a given theta value, the less information a test yields, typically, at the margins of the person distribution (e.g., extremely low or high scores on a test). The opposite is also true, the smaller the measurement error, the more information a test yields, typically, toward the center of the person distribution. Because measurement error varies across the range in theta based on the TIF, marginal reliability is calculated conditional on both theta and associated standard errors across the range in the calibrated scale. In this chapter, marginal reliability estimates are presented followed by plots of TIF by grade, content area, and tier for all tests comprising the PASA.

4.1 Marginal Reliability by Content Area, Grade, and Tier

Marginal reliability estimates are generally within acceptable ranges for drawing test-based inferences, with ELA and Math more reliable, on average, than Science. Overall, marginal reliability values range from 0.59 to 0.86 across all content areas, grades, and tiers. For ELA, marginal reliability ranges from 0.78 to 0.86. For Math, marginal reliability ranges from 0.71 to 0.86. And for Science, marginal reliability ranges from 0.59 to 0.74, with the lowest reliability estimated for the Grade 8, Tier 1 (0.59) and Grade 11, Tier 1 (0.64) Science tests.

Grade	Tier	Content	Marginal Reliability
3	1	ela	0.87
3	1	math	0.83
3	2	ela	0.75
3	2	math	0.78

11	2	math	0.71
11	2	science	0.73

5 Test information functions

Below, TIFs are plotted by content area, grade and PASA test tier. The peak (or highest point) in the TIF is the point at which test information is maximized for a given theta (or person ability) estimate. Each plot shows the theta ranges for which marginal reliability is equal to or greater than 0.80 (darker blue area under the TIF) and 0.70 (lighter blue area under the TIF) for the calibrated scale. While many PASA tests provide precise information, with a marginal reliability of at least 0.80, on either side of average person ability ($\theta = 0$; e.g., ELA, Grade 3, Tier 1, and Math, Grade 3, Tier 1), some PASA tests provide more precise information for lower person ability ranges ($\theta < 0$), with less information provided at the higher end of the person ability distribution (e.g., ELA, Grade 3, Tier 2, and Math, Grade 3, Tier 2).

8 Accuracy & Consistency

Results from the 2019-20 PASA test administration were analyzed using Rudner's classification index (Rudner, 2005). Results closer to 1.0 indicate the likelihood that a student was appropriately classified as proficient (Performance level of Proficient or Advanced) or not proficient (Performance Level of Novice or Emerging) and the likelihood that the student would be classified in the same Performance level category given an additional test administration (Accuracy and Consistency, respectively). The calculation utilizes item difficulty and (student ability) theta value distributions, as well as related standard errors of measurement (SEM), to generate probabilistic estimates based on one test administration. Complete results for each content area and grade, generated from the *cacIRT* package in R, are provided below. Please note that in cases in which there were no students in a proficiency level in a grade/tier, results cannot be reported.

Results indicate moderate to high levels of classification Accuracy (1.0 to 1) and Consistency (0.76 to 1.0).

8.1 English/Language Arts (ELA)

8.1.1 Grade 3 Tier 1

Proficiency Level Cut	Accuracy	Consistency
Novice - Emerging	1.00	0.99
Emerging - Proficient	0.90	0.86
Proficient - Advanced	0.94	0.92

9 Content Validity

9.1 Summary of Validity Based on Content

A number of dimensions are considered in the content covered across AECs. First, the type of item is organized into (a) anchor items, that facilitate form comparability from year to year, (b) Linking Tier 1 items (LT1) for low performing students assigned to this Tier, (c) Linking Tier 2 (LT2) for higher performing students assigned to this Tier, and (d) unique items (d) that are being field tested for eventual placement on the test in future years. Note that the test for each Tier includes LT1 and LT2 so that students not placed in that Tier can perform not only on the items in their assigned Tier but also take items in the Tier where they are not placed. This crosswalk of items with students is important linking the two Tiers with both populations.

Summary of Alternate Eligible Content (AECs) by Item Code, Content Category, and Tier

In English Language Arts, four categories of content are included: Literature, Information, Writing, and language. In Mathematics, four content categories are included: numbers and operations, operations and algebra, geometry, and measurement and data. In Science, four categories of content are included: natural science, biology. Physics, and earth-space. In all grades, these items are one of four types (Anchor, LT1, LT2, and Unique) and used in either Tier 1 and/or Tier 2.

See Appendix 1.7 (ELA), Appendix 1.8 (Math), Appendix 1.9 (Science)

Summary of Appendices/Findings. The PASA tests are systematically organized to reflect not only a broad range of Alternate Eligible Content (AECs) in English Language Arts (ELA), Mathematics, and Science) but also a number of content categories to appropriately distinguish these complex constructs. Furthermore, this range is considered across both tiers and four types of items (anchor [A], linking to Tier 1 [LT1], linking to Tier 2 [LT2], and unique [U]). Two problems, however, result in stretching the item bank across so many dimensions: (a) many cells have no or few items, and (b) distinguishing anchor-linking items was unfruitful as both a- and b-parameters were missing where they should have been (A, LT1, and LT2) and present where they should not have been present U). Therefore, to connect the scale to that used last year (2019), all items with a- and b-parameters were used irrespective of designation.

9.1.1 Item Quality (IQ) Reports for ELA-Math and Science

In the fall of 2019, all items in all subject areas, grades, and tier were revised in the number of prompts allowed, from multiple (2+) prompts to only 1. At the same time, errors were corrected and the language of the prompts clarified and reduced in verbiage. Each item was reviewed and revised by personnel in Behavioral Research and Teaching (BRT), then reviewed by personnel from the Bureau of Special Education, and finally reviewed by teachers in PA. Using the Distributed Item Review (DIR) process, teachers were assigned by

grade band and subject area to respond to a number of statements reflecting item-standards alignment and bias. Two reports were published that document the entire process and the item quality.

See Appendix 1.10 (ELA and Mathematics) and Appendix 1.11 (Science)

Summary of Appendices/Findings The reports reflect positive reactions from teachers across all subject areas, grades, and tiers. They generally approved of the (a) correctness of the items, (b) the use of a single prompt, and (c) the structure/format of the item in line with the presentation of the main stimulus and options. As expected, some variation existed among the teacher teams and individual judges.

9.1.2 Identification of Standards with Common Items Across Tiers – Pivot Tables with Item Map files

In the summer of 2020, researchers at Behavioral Research and Teaching (BRT) used item maps to fix the scale to be the same as used in 2019, allowing comparisons to be made over time. In the end, after discovering that all items were used with a-parameters and b-parameters (irrespective of their code A, LT1, LT2, or U). In this appendix, tables present the number of items used within content categories.

See Appendix 1.12 (ELA, Mathematics, and Science)

Summary of Appendices/Findings. The content covered across tiers is sufficient in the number of items to allow the 2019 scale to be used.

10 Item Parameters and Item Fit

10.1 IRT Models for Scaling

10.1.1 ELA & Mathematics: 2PL IRT

$$P(Y = 1) = \frac{e^{a_j(\theta_i - b_j)}}{1 + e^{a_j(\theta_i - b_j)}}$$

10.1.2 Science: 1PL IRT w/ Guessing

$$P(Y = 1|\theta_i, a, b_j, c_j) = c_j + (1 - c_j) \left(\frac{e^{a(\theta_i - b_j)}}{1 + e^{a(\theta_i - b_j)}} \right)$$

10.2 Item Parameter and Fit Summary

10.2.1 ELA

Item parameters and fit statistics are summarized by content area, grade, and tier for all PASA tests in the tables, below. RMSEA, the root mean square error of approximation, offers an indication of item fit to the two-parameter logistic (2PL) IRT models used in scaling ELA and Math, and the one-parameter logistic (2PL) IRT model with guessing parameter used in scaling Science. For RMSEA, values of < 0.03 indicate excellent fit, with values < 0.07 (see Steigler, 2007). Below, RMSEA item fit statistics are summarized, with the range, mean, and potentially problematic items (RMSEA ≥ 0.08) listed, for each ELA test. RMSEA for all ELA items are then given in the grade- and tier-level tables that follow:

- **Grade 3, Tier 1:** Range = 0.00 to 0.06; M = 0.017
- **Grade 3, Tier 2:** Range = 0.00 to 0.14; M = 0.045; E03AV4.1.1a.10, E03AV4.1.1a.12, E03AV4.1.1b.4, E03AV4.1.2a.7, and E03BK1.1.2b.7; RMSEA for item E03C1.3.1a.2 was not estimable

- **Grade 4, Tier 1:** *Range* = 0.00 to 0.04; *M* = 0.015
- **Grade 4, Tier 2:** *Range* = 0.00 to 0.06; *M* = 0.017
- **Grade 5, Tier 1:** *Range* = 0.00 to 0.08; *M* = 0.014; E05BK1.1.1c.4
- **Grade 5, Tier 2:** *Range* = 0.00 to 0.05; *M* = 0.012
- **Grade 6, Tier 1:** *Range* = 0.00 to 0.07; *M* = 0.019
- **Grade 6, Tier 2:** *Range* = 0.00 to 0.04; *M* = 0.014
- **Grade 7, Tier 1:** *Range* = 0.00 to 0.13; *M* = 0.025; E07AK1.1.1c.3
- **Grade 7, Tier 2:** *Range* = 0.00 to 0.09; *M* = 0.025; E07AK1.1.1a.8 and E07AV4.1.1a.9
- **Grade 8, Tier 1:** *Range* = 0.00 to 0.08; *M* = 0.020; E08BK1.1.2a.7
- **Grade 8, Tier 2:** *Range* = 0.00 to 0.04; *M* = 0.016
- **Grade 11, Tier 1:** *Range* = 0.00 to 0.04; *M* = 0.013
- **Grade 11, Tier 2:** *Range* = 0.00 to 0.05; *M* = 0.013

10.2.16 Math

RMSEA item fit statistics are summarized, with the range, mean, and potentially problematic items (RMSEA ≥ 0.08) listed, for each Math test. RMSEA for all Math items are then given in the grade- and tier-level tables that follow:

- **Grade 3, Tier 1:** *Range* = 0.00 to 0.04; *M* = 0.018
- **Grade 3, Tier 2:** *Range* = 0.00 to 0.09; *M* = 0.037; M03BO3.1.5b.3 and M03DM1.2.1a.5
- **Grade 4, Tier 1:** *Range* = 0.00 to 0.04; *M* = 0.017
- **Grade 4, Tier 2:** *Range* = 0.00 to 0.18; *M* = 0.038; M04AT1.1.3a.2 and M04CG1.1.2a.6
- **Grade 5, Tier 1:** *Range* = 0.00 to 0.04; *M* = 0.020
- **Grade 5, Tier 2:** *Range* = 0.00 to 0.06; *M* = 0.024
- **Grade 6, Tier 1:** *Range* = 0.00 to 0.06; *M* = 0.020
- **Grade 6, Tier 2:** *Range* = 0.00 to 0.12; *M* = 0.026; M06AR112a_2019.1 and M06DS1.1.2a.11
- **Grade 7, Tier 1:** *Range* = 0.00 to 0.07; *M* = 0.027
- **Grade 7, Tier 2:** *Range* = 0.00 to 0.07; *M* = 0.020
- **Grade 8, Tier 1:** *Range* = 0.00 to 0.12; *M* = 0.028; M08BF2.1.1a.22
- **Grade 8, Tier 2:** *Range* = 0.00 to 0.05; *M* = 0.015
- **Grade 11, Tier 1:** *Range* = 0.00 to 0.08; *M* = 0.027; CC24HSB5a_2019M.3
- **Grade 11, Tier 2:** *Range* = 0.00 to 0.07; *M* = 0.013; RMSEA for items CC.2.3.HSA13a.15 and CC23HSA13a_2019.1 were not estimable

10.2.31 Science

RMSEA item fit statistics are summarized, with the range, mean, and potentially problematic items (RMSEA ≥ 0.08) listed, for each Science test. RMSEA for all Science items are then given in the grade- and tier-level tables that follow:

- **Grade 4, Tier 1:** *Range* = 0.00 to 0.10; *M* = 0.039; S4.B.1.1.3.3 and S4.B.1.1.4.4
- **Grade 4, Tier 2:** *Range* = 0.00 to 0.15; *M* = 0.033; S4.A.2.2.1.4 and S4.D.1.2.2.3
- **Grade 8, Tier 1:** *Range* = 0.00 to 0.08; *M* = 0.035; S8.A.3.1.5b.2
- **Grade 8, Tier 2:** *Range* = 0.00 to 0.12; *M* = 0.032; S8.A.2.2.1.6, S8.B.1.1.3.5, and S8.C.2.2.3.6
- **Grade 11, Tier 1:** *Range* = 0.00 to 0.12; *M* = 0.049; S11.A.2.1.3.6, S11.A.3.1.2.7, S11.B.3.1.4a.2, S11.B.3.1.4b.11, and S11.B.3.1.4b.9
- **Grade 11, Tier 2:** *Range* = 0.00 to 0.06; *M* = 0.023; RMSEA for item S11.B.1.1.2.6 was not estimable

Steiger, J. H. (2007), Understanding the limitations of global fit assessment in structural equation modeling. *Personality and Individual Differences*, 42, 893-98.

11 Convergent/Divergent Validity

To examine convergent and divergent validity evidence, (a) correlations were conducted to examine the relation between scale scores in the different content areas (ELA with Math, ELA with Science, and Math with Science), and (b) Chi-squared tests of independence were conducted to examine whether performance level scores (i.e., *Advanced*, *Proficient*, *Emerging*, of *Novice*) were independent across content areas at the $p = .01$ significance level. Note that the p -values were computed for a Monte Carlo test (Hope, 1968) with 2,000 replicates.

We also display histograms of the number of items with no response and the number of items not attempted.

12 Correlations Among Content Areas

Correlations for ELA with Math ranged from 0.29 to 0.71, correlations for ELA with Science ranged from 0.61 to 0.82, and correlations for Math with Science ranged from 0.32 to 0.61. Please see Table 6.1.1. Across grades, correlations are almost always higher for Tier 1 than Tier 2 (except Grades 8 ELA with Math, and all Grade 11 correlations). Across Grades 4, 8 and 11, correlations for ELA with Science were higher than correlations for Math with Science.

12.1 Correlations between Content Areas by Grade and Tier

Grade	Tier	ELA with Math	ELA with Science	Math with Science
3	1	.51	—	—
3	2	.51	—	—
4	1	.69	.82	.61
4	2	.42	.70	.40
5	1	.71	—	—
5	2	.39	—	—
6	1	.69	—	—
6	2	.35	—	—
7	1	.71	—	—
7	2	.36	—	—
8	1	.36	.77	.37
8	2	.39	.66	.32
11	2	.29	.61	.37
11	1	.41	.80	.40

13 Chi-squared Tests of Independence for Performance Levels Among Content Areas

Across grades and tiers, all Chi-squared tests of independence were statistically significant, except Grade 4, Tier 2 ELA - Science. Thus, in general, performance level scores in one content area were not independent of performance level scores in another content area.

15 Fairness and Accessibility

As noted in the Standards for Educational and Psychological Testing, Standard 3.3 specifies that “Those responsible for test development should include relevant subgroups in validity, reliability/precision, and other preliminary studies used when constructing the test” (p. 64). This argument is expanded to include reporting outcomes by relevant subgroups, noting however, that “subgroup differences do not in and of themselves indicate lack of fairness, but such differences should trigger follow-up studies, where feasible, to identify the potential causes of such differences” (p. 65). American Educational Research Association, American Psychological Association, National Council on Measurement in Education (2014). Standards for Educational and Psychological Testing. Washington, DC: Authors. This evaluation was completed by comparing the performance (by subject area, grade level, and Tier) for the following student groups: (a) sex, (b) race-ethnicity, (c) (Limited) English Proficiency, (d) disability, and (e) free-reduced price lunch. This evaluation involved comparing student counts and average differences (using the mean relative to the standard deviation). The tables are displayed in an appendix.

16 English Language Arts

16.1 Gender

Few differences were reported by gender. Most of the student counts, averages, and standard deviations were similar for males and females. In Tier 2, slight difference (half a standard deviation) were present in the earlier (elementary) grades.

Grade	Tier	Cohen's D (Female - Male)

6	1	0.07
6	2	0.05
7	1	0.00
7	2	-0.08
8	1	0.02
8	2	-0.14
11	1	-0.03
11	2	0.13

16.2 Limited English Proficiency

With Limited English Proficiency (coded as No versus Yes) within Tiers and grade levels, few differences were apparent in averages and standard deviations. On the other hand, as expected, great differences were present in the number of students (count) in these two groups.

Grade	Tier	Cohen's D (No - Yes)
3	1	-0.08
3	2	0.05
4	1	0.06
4	2	0.05
5	1	-0.02
5	2	0.47
6	1	-0.11
6	2	0.50
7	1	-0.26
7	2	0.36
8	1	0.06
8	2	0.26
11	1	0.05
11	2	0.66

16.3 Economically Disadvantaged

For the analyses comparing students receiving free and reduced price lunch, slightly higher performances were present for those not receiving such support; this was true across grades and as well as Tiers.

Grade	Tier	Cohen's D (No - Yes)
3	1	-0.23
3	2	-0.18
4	1	-0.44
4	2	-0.23
5	1	-0.42
5	2	-0.10
6	1	-0.42
6	2	-0.31
7	1	-0.35
7	2	-0.31
8	1	-0.26
8	2	-0.24
11	1	-0.22
11	2	-0.24

16.4 Disability

Like race-ethnicity (which had many different coded values), the analysis by disability resulted in great variation in counts, averages, and standard deviations. The two most present disabilities were Autism and Intellectual Disabilities, with Multiple Disabilities also quite prominent. This was true for both Tiers and across grade levels. Please see the appendix for descriptive statistics (counts, means, and standard deviations).

16.5 Ethnicity

When comparing the performance of students from different racial and ethnic groups, across the grade levels and Tiers, considerable variation was present in all aspects of count (number of students), averages, and standard deviations. Please see the appendix for descriptive statistics (counts, means, and standard deviations).

17 Mathematics

17.1 Gender

We found more males participating in the PASA than females, sometimes double the number. This was true across grades and Tiers. Furthermore, performance differences were slightly greater for males than females, across grades and Tiers. Both males and females had similar variance (standard deviations).

Grade	Tier	Cohen's D (Female - Male)
3	1	0.01
3	2	-0.61
4	1	-0.17
4	2	-0.48
5	1	-0.13
5	2	-0.41
6	1	-0.05
6	2	-0.26
7	1	-0.12
7	2	-0.18
8	1	-0.06
8	2	-0.18
11	1	0.03
11	2	-0.11

17.2 Limited English Proficiency

Limited English Proficient students, though fewer than the number of students deemed proficient, performed equally as well to those proficient, in all grades and Tiers; the variance in these two groups was comparable.

Grade	Tier	Cohen's D (No - Yes)
3	1	0.04
3	2	-0.34
4	1	-0.01
4	2	0.00
5	1	-0.14
5	2	-0.03
6	1	-0.15
6	2	-0.04
7	1	-0.17
7	2	0.07
8	1	-0.06
8	2	-0.23
11	1	-0.01
11	2	-0.15

17.3 Economically Disadvantaged

Students receiving free and reduced price lunch performed comparably to students who did not receive such support. The count of students in both groups was much greater in Tier 1. Though fewer in number (by half), the averages and standard deviations were quite similar with those receiving support often a bit higher (by a half standard deviation).

Grade	Tier	Cohen's D (No - Yes)
3	1	-0.18
3	2	-0.18
4	1	-0.30
4	2	-0.11
5	1	-0.40
5	2	-0.09
6	1	-0.40
6	2	-0.23
7	1	-0.40
7	2	-0.16
8	1	-0.21
8	2	-0.09
11	1	-0.16
11	2	-0.22

17.4 Ethnicity

The largest group of students were White, followed by Black/African American, and finally Hispanic students. This was true for all grades and Tiers. Wide variation existed in both the averages and standard deviations. Please see the appendix for descriptive statistics (counts, means, and standard deviations).

17.5 Disability

The largest group of students were with Intellectual Disabilities or Autism, followed by Multiple Disabilities. Great variation was present in averages and standard divisions. Many disabilities had very few students participating in the PASA. Please see the appendix for descriptive statistics (counts, means, and standard deviations).

18 Science

18.1 Gender

In most grades and Tiers, far more males than females participated in the Science PASA and for both groups, more students took Tier 2 than Tier 1. Their performance (averages and standard deviations) were comparable.

Grade	Tier	Cohen's D (Female - Male)
4	1	0.20
4	2	-0.21
8	1	-0.01
8	2	-0.32
11	1	0.20
11	2	-0.12

18.2 Limited English Proficiency

The number of students with Limited English Proficiency was fairly small and much less than those with English proficiency. Both groups performed comparably (in averages and standard deviations) across the grades and Tiers.

Grade	Tier	Cohen's D (No - Yes)
4	1	-0.16
4	2	0.28
8	1	0.08
8	2	0.25
11	1	-0.02
11	2	0.30

18.3 Ethnicity

The count was greatest with White, then Black-African American, and Hispanic students. Values (averages and standard deviations) were slightly varied across the grades and Tiers but not as much as in ELA and Mathematics. Please see the appendix for descriptive statistics (counts, means, and standard deviations).

18.4 Disability

As in ELA and Mathematics, the count of students was greatest with Autism and Intellectual Disabilities. Performance was somewhat varied (in averaged and standard deviations) across the grades and Tiers. Some disability areas were represented with only a few students, making it difficult to generalize. Please see the appendix for descriptive statistics (counts, means, and standard deviations).
